

1 System configuration

Use following table to configurate your personal system:

1. # of lifting columns: How many lifting columns do you need for your application?
(1 – 8)
2. Stroke length: How much stroke length do you need?
(max. 300 or max. 400 mm) (*max. 12" or max. 16"*)
3. Max. system load: How much weight do you need to lift?
(200 / 400 / 600 / 1'000 / ... kg) (*440 / 880 / 1'320 / 2'200 / ... lbs*)

NOTE

- Weight of table plate/frame must be included into calculation
- Avoid uneven load distribution
- No high impact loads allowed
- Consider max. allowed side forces and bending moments

4. Lifting column type: The table shows the correct type of lifting column, fitting your configuration.
 - For more information please check the data sheets and drawings
5. Control box type: The table shows the correct type of control box, fitting your configuration.
 - For more information please check the instruction manual
6. Lifting speed The table shows the lifting speed of the system. All lifting columns drive synchronously.
7. Duty cycle On/Off: When operating the system with max. load, strong heat is generated during the lifting movement inside the gearbox, the spindle nut and the control box. For the components to be able to cool down, it is important to take enough operating breaks.

Duty cycle monitoring:

After a specific operating time «On», the control box will automatically pause «Off» for a while, before allowing the user to continue with operating.
